

# SCREENING BUCKET

The Blue Diamond® Screening Bucket is used for the screening, aerating, separating and mixing of soils, aggregates, woodchip and compost. The efficient screening process is created by the star rotors agitating the material, causing the fines to flow through the rotating stars leaving the oversized material in the bucket.

## FEATURES INCLUDE

- 1" or smaller material will flow through
- Horizontal shafts, fitted with poly stars that rotate in the same upwards direction
- Hardened steel cutting edge
- 2-position mount plate
- 1-year warranty
